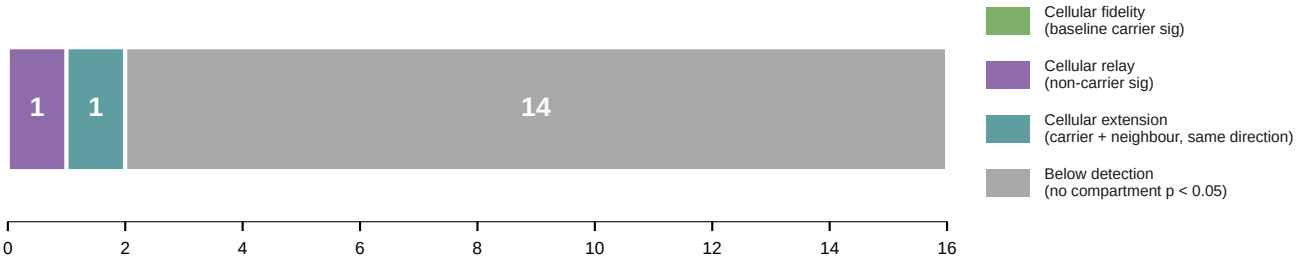
Fig 3c Cellular fidelity classification (LA snRNA, 16 families)



Members per class

Fidelity:	(none)
Relay:	F15 (endothelial,lymphocyte)
Extension:	F16 (atrialCM,fibroblast)
Below detection:	F1, F2, F3, F4, F5, F6, F7, F8, F9, F10, F11, F12, F13, F14

GSE255612 LA snRNA resolves cellular attribution for only 2/16 families at nominal p < 0.05.
Bulk AF rewiring signals (Fig 2) for the remaining 14 families are either
(i) driven by RA-side changes not observable in this LA-only dataset,
(ii) diluted below per-compartment detection limit at compartment-level pseudobulk resolution, or
(iii) confounded by sub-cell-type composition shifts not captured by per-cell averaging.
