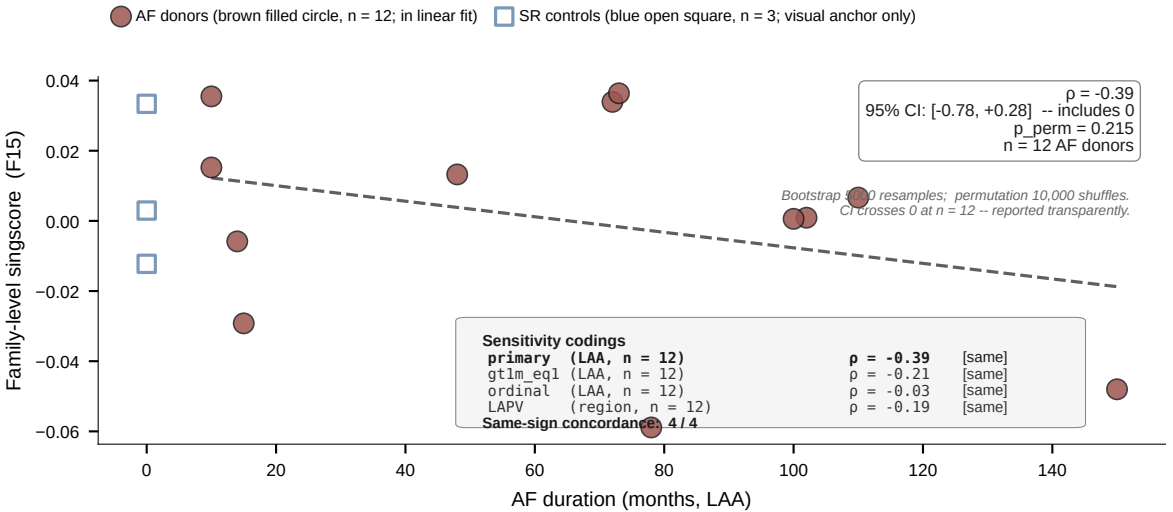
Fig 4f F15 NTRK2 / TrkB signalling — Weak-trend (cross-Fig 3D link)

Weak-trend (cross-Fig 3D link)



GSE41177 LAA bulk RNA-seq. AF n = 12 donors with numeric duration; SR n = 3 (anchor only). Linear fit shown for visualisation only; ρ is rank-based. LAPV sensitivity row uses the paired LAPV-region cohort (n = 12), not LAA-pooled.

Data:

F15 (NTRK2 / TrkB signalling, RA-biased baseline) sits just below the Strong-trend threshold (ρ = -0.39 in primary, 4/4 sensitivity concordance).

Cross-figure link:

F15 was classified as cellular relay in Fig 3D (significant downshift in lymphocyte + endothelial, carrier fibroblast unchanged). The convergence of single-cell relay (Fig 3D) and bulk duration decline (Fig 4f) strengthens F15's atlas prioritisation despite being individually marginal in either axis alone.
