Fig 5b Cross-figure triangulation (16 NCP_v3 families)

Stage-grouped layout: L0 HCA carrier → L1 bulk → L2 snRNA → L3 duration → Atlas

Stage-grouped layout: L0 HCA carrier → L1 bulk → L2 snRNA → L3 duration → Atlas. Continuous cells: BrBG palette (white = 0; deep red = positive / LA-ward; deep blue = negative). Yellow border = layer-supportive. * p_perm < 0.05; . p_perm < 0.10.
L2 Δ = signed ΔScore at the healthy LA carrier cell type; L2 supportive (yellow border on fidelity strip) = fidelity_class {Fidelity, Relay, Extension} (signal may reside in a non-carrier compartment, e.g. F15 Relay → lymph + endothelial). Hatched L2 cells = LA car
