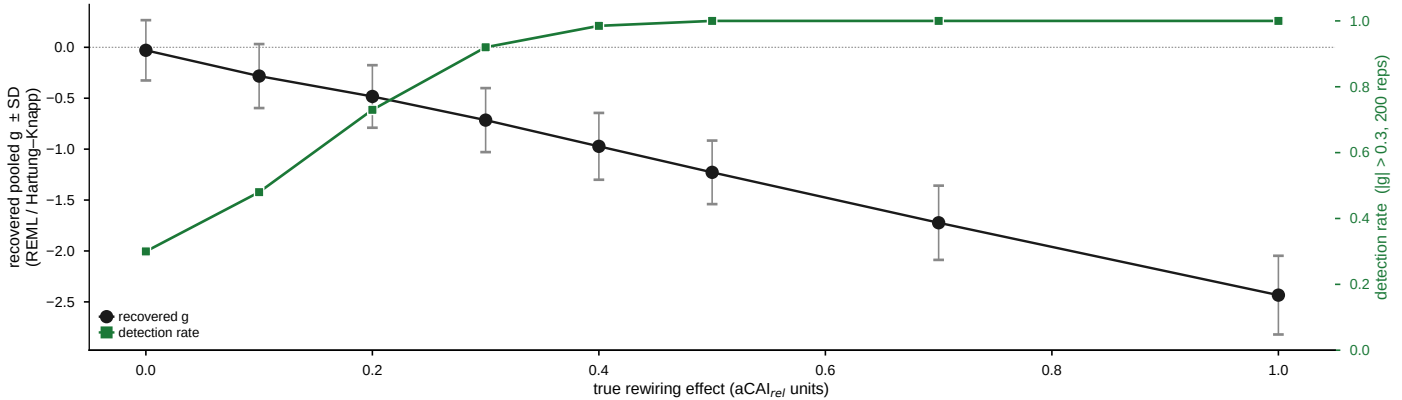
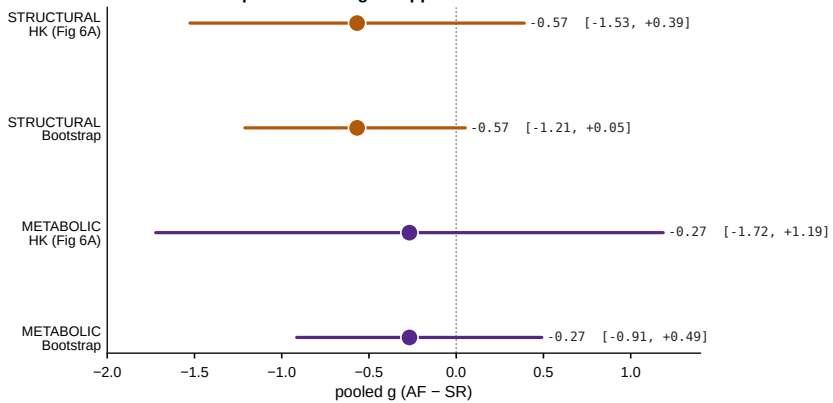
S11

Method-validity P5 — simulation, bootstrap, classical-comparison

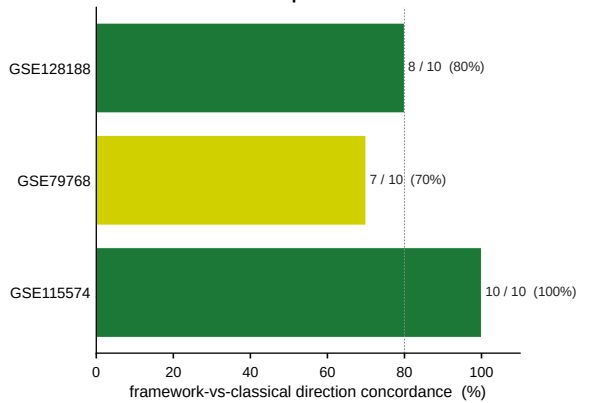
S11a — recovery of axis pooled g (cohort-matched synthetic data)



S11b — bootstrap CI vs Hartung–Knapp CI



S11c — classical limma per-chamber AF vs SR concordance



Synthetic data: cohort-matched donor counts (5+5, 7+6, 13+15); 200 reps per effect size. Bootstrap: 2000 cohort-donor resamples. Classical: per-cohort, per-chamber limma AF vs SR; concordance is sign-equality with framework Welch t.
