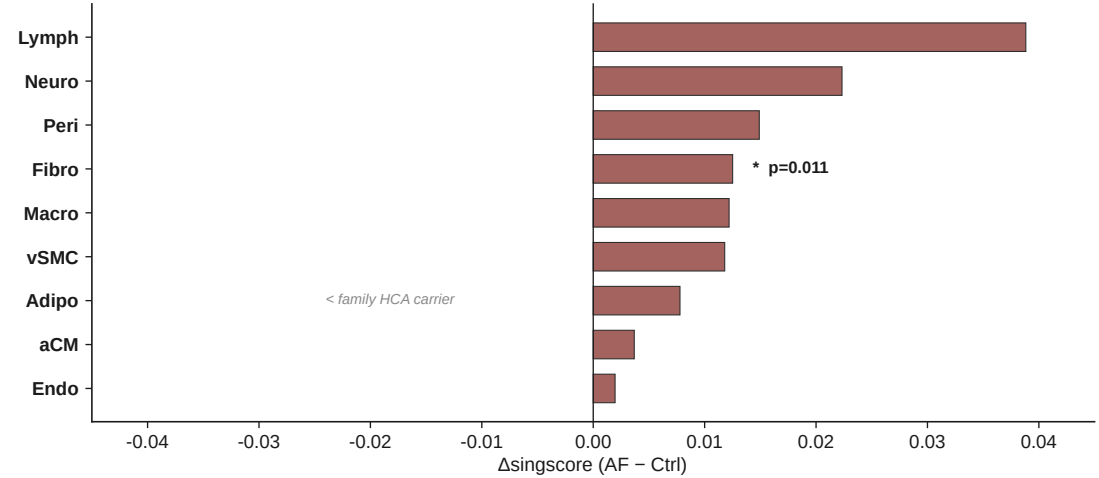
F4 BCAA constituent-program fibroblast support

Program-level example only · parent F4 family remains Below-detection · not a fifth non-Below family · not FDR-controlled discovery · does not alter Figure 3 family classes or Figure 5 support counts



Corrected exact-reference singscore: BCAA constituent program (REACTOME branched-chain amino-acid catabolism) shows nominal fibroblast support (Δ=0.0125, p_perm=0.0115; n_ctrl=16, n_af=18). Family-level F4 class = Below-detection. HCA LA carrier prior for F4 = Adipo. Color encodes direction only (red AF>Ctrl; blue AF<Ctrl), not fidelity class.
